

Amazon Secured Crypto Token/Coined

In the World of CryptoCurrency, the ability to secure the Token, establish value to the Token, and have the ability to return value of the Token at the time of redemption, has been unsettling to the CryptoCurrency concept, that will no longer be an issue.

This concept of CryptoCurrency has changed the way financing and investing takes place in our World. In these last five (5) years, the technology using financial concepts in conjunction with CryptoCurrency and ‘Blockchain’ security systems, has emerged in the World of Business. The use of CryptoCurrency has made it easier for the average individual seeking funding or to raise capital to launch their own company's development projects, has now become a reality. In this proposal, we have taken the next step from the past and conceptualized the future.

The Cooperative postulation and conviction has been with us since businesses started among humans We have now put this concept “on steroids”. Our opinion that cooperative ownership of instruments of value, known as Tokens, can be considered Fractional Ownership. In theory, ownership of a purchased ‘Token’ is as if purchasing an asset, NOT an “investment of contract”, and under these circumstances, these are Tokens that are to be backed by extracted and in-ground mineral resources which will increase as the Mining Company develops the project and as those consumable assets are utilized.

Tokens will be purchased for development, operating expenses, extraction costs and additional exploration outlay, which does not fall within the realm of an (SEC) security transaction. When the investor's actions largely dictate whether the investment will be profitable, then that instrument is traditionally NOT an (SEC) security.

The representation of the Howey Test looks at the investment's substance, rather than its form as the determining factor for whether it is an (SEC) security and needs to be registered within the United States, Security and Exchange Commission (SEC). This instrument of value will be known as a “Token” with a certificate of ownership, the set price for which the Token was purchased for, coupled with the number of Tokens purchased Looking at the economic realities

behind this investment, purchase of ownership, and the ability of the owners, as fractional owners, to do as necessary with their Tokens.

This process allows for significant influence over how the purchaser of Tokens manages their investment. This also eliminates the need for any SEC registering within the United States of America. As the Mining Company is excavating the minerals, the Tokens will be awarded a value at the time of purchase. The Fractional Owners, as Tokens Holders, will have control over the trading and sales of their Tokens.

Each fractional ownership of a Token will possess an intrinsic value, which is in addition to their fractional ‘proportional’ ownership position. Each Token will be produced from one (1) Oz./.999+ of Silver, respectfully this one (1) Oz. of silver, will be produced until, under certain circumstances beyond the Company’s control, Certificates of Silver will have to be issued and redeemable for Coined Tokens when circumstances will allow.

Imagine having an opportunity to be rewarded for helping raise money to fund a significant World recognized mining company's operation to recover consumable natural resources such as; Gold, Silver, Titanium, Lithium, (The property is located in an area known as the “Lithium Triangle”) Silica, Rare-Earth Minerals (“Atacama Desert”) and significant (“High Purity”) Sulfur, the kind needed in the new Lithium and Cobalt [Co#27] Batteries.

These indisputable facts were drawn from the extensive review of the recoverable minerals, and the developmental feasibility studies concerning these Piedra Amarilla Properties, located in the mining-friendly Country of Chile, in Region III. (These studies are in the remaining documentation which can be reviewed at www.BHSB.biz) Please understand that the resurrection of the Piedra Amarilla Properties is the first step towards commencement, establishing the Secured Token Offering (STO), through capitalization conversion support at the crypto launch.) The Token will have a purchase price, (one (1) Oz./.999+ Silver Token/Coined, “Mint to be named”), and the purchase price of the Fractional Ownership portion of the Token, it can be traded and an increase of value can be requested by its owner and managed by the CRYPTO-MANAGEMENT TEAM

(name TBD) this is where the purchaser largely dictates how their investment will be profitable.

There will be ‘redemption’ under levels of understanding, through “non- associated” Parties, as Token purchasers. To be named. [; Norfed, and CSI Ag. Limited, at this time.] Note that the Fractional Ownership of Tokens, backed by the mining properties assets, does not make you a shareholder in the mining company. The entitlement of Token holders will be through the Token's intrinsic value, and proportionally a fractional value of the Mining Company’s net profits from the Piedra Amarilla Properties paid on a quarterly-bases.

Security Tokens offer greater value of ownership over certain projects or businesses. Security tokens have the added benefit of surpassing the traditional complex paperwork of owning shares with their records being kept on the public block-chain ledger. Security Tokens structure, distribution, or changes that could affect investors are now accessible to all via block-chain technology.

WHAT IS A SECURITY TOKEN:

Security Tokens share many of the characteristics or can be viewed as a combination of, fungible and non-fungible Tokens. Security Tokens are designed to represent complete or fractional ownership interest in assets and/or entities While utility Tokens have no limitations on who can send or receive the token, Security Tokens are subject to many restrictions based on identity, jurisdiction, and asset category.

In conclusion, to make your CryptoCurrency Token a winner; “The need is to create an Asset-Backed Crypto Currency Token; that is secured by highly sought after consumable minerals, precious metals, and significant industrial ore bodies as their assets”... This is an unprecedented opportunity as well as, unparalleled in the CryptoCurrency industry. Act now!
