

## **INFORMATION REGARDING THE PURCHASE OF BULLET COINS / SHARES**

There are currently 5,000,000 available Corporate Shares. One Share comprises one Token/Coin (Bullet Coin). One Bullet Coin currently has a value of 1 ounce of 99.9% Pure Gold. Each Bullet Coin has its own unique registry number and Certificate of Ownership on AMC's Corporate Ledger/Registry.

Upon First Launch, one share will cost one thousand US dollars. One Share will have the value of one Bullet Coin, of 99.9% Pure Gold.

One Share = one ounce (oz.) coin as Market Value in US dollars as Gold on the AMC Public Ledger Registry in the purchaser's name and Certificate of Ownership (A Share can be collectively purchased as one entity and traded as one entity as one Bullet Coin).

A Share's value of Bullet Coin cannot be traded as fractional Shares below 10% of its value. If such a transaction occurs, the Share will be returned to the Registry. The remaining 90% of the Share's Value in Bullet Coin(s) will be paid out to Share Holders at the current market value, and no longer be traded fractionally on the Market's Public Ledger/Registry ... and only Gold's market value.

A buyer purchases one Share for one thousand US dollars, and AMC secures back to the buyer one thousand US dollars in Gold, giving the buyer the ability to use the one thousand US dollars to be traded on our Cryptocurrency exchange as one oz. of Gold. As history has proven time and time again, the value of the Bullet Coin will certainly increase.

The registry numbers assigned to the Bullet Coins will reduce, and or eliminate the risk of forgery, resulting in the Bullet Coins having a secured value within AMC (Amazon Mining Chile). The registered Bullet Coins can be sold by trading on our Exchange for their increased value obtained from the speculator's market, with high-quality Real-Assets and their growth potential will be paid back in Profit Sharing deep within Amazon Mining Chile, AMC.

Once the Bullet Coins are removed from the registered Bank and or Ledger in the Crypto-Cloud, they are redeemed at their current market value and are no longer traded on the Exchange. Currently, Gold will only be traded in ounces and fractional shares at 10% per the Shares' value to be credited as a Bullet Coin asset. Shortly, Silver Bullet Coins will also be traded in ounces.

The ability to trade up to 90% of the Share's (Bullet Coin's) value will create a very lucrative profit source, coupled with the Shareholders' ownership, including profits as a Shareholder from AMC. Profits will consist of the recovery of assets from the mining conducted by AMC. Further profits will be available to Share Holders from transactions on our fee-based exchange.

There are a limited number of Bullet Coins/Shares produced and made available, creating a vibrant market fueled by simple supply and demand economics. As the speculators see their dream opportunity with Bullet Coins come to fruition, it is obvious to see the value this Cryptocurrency-plus opportunity affords to participating shareholders.

The goal of AMC is to have our technology complete, secure, and capable of completing a transaction within 3 to 5 seconds. ("Ripple's")

There will be different levels of transaction fees based on each transaction's value. This will advance our blockchain network with its fluidity as well as an incentive to the different transaction validation service providers.
